Serving Industries Worldwide

Wind Turbine Bearings

Manufacturers of Ball and Roller Bearings

Scheerer Bearing Corporation
Achieve Peak Performance in Wind Turbines

Scheerer provides wind turbine manufacturers high-performance bearings designed for the unique stresses of these ultra-large machines. Environmental considerations, component durability requirements, manufacturing limitations, material choices, load fluctuation, lubrication options and mounting all influence the success of a bearing design. Talk to us and see for yourself why Scheerer has been a trusted bearing supplier for industries that think big.

A Trusted Energy Partner
Scheerer Bearing has been an energy industry partner since its founding. Our comprehensive, state-of-the-art bearing product line is ideally suited for the wind turbine market. Scheerer brings decades of engineering expertise focused exclusively on the highest performance ball and roller bearing design and bearing assemblies. We’ve achieved a reputation for helping manufacturers maximize output efficiencies by tailoring the bearing design to the unique functional needs of their equipment. The push toward coastal wind farms will present challenges different from land based turbines. Our experience with large scale bearings operating in marine environments can be a valuable asset in your design.

A Reputation for Quality, Service and Craftsmanship
Scheerer Bearing has been manufacturing and rebuilding industrial bearings for nearly five decades. We have the knowledge and experience required to service bearings of virtually every category, material and operating environment.
Putting the Best in Bearing Technology to Work

Split Inner Radial Ball Bearing
Four-point contact ball bearings can carry considerable axial load in both directions in a very confined space. These bearings provide excellent cost-performance ratio.

Full Complement Cylindrical Roller Bearing
This bearing category provides the highest possible load carrying capacity within an allotted volume. This translates to increased equipment reliability with lower installed weight. These bearings are ideally suited to critical applications where the weight must be lifted to considerable heights.

Radial Ball Bearing
Scheerer Radial ball bearings deliver ease of installation and are ideal for applications where equipment reliability is paramount and component availability is critical.

Spherical Roller Bearings
Double-row spherical roller bearings are capable of carrying heavy loads in both radial and axial directions. They are self-aligning, thus compensating for shaft deflections and seat misalignment. Available in a variety of standard and special designs, with cylindrical and tapered bore.

Slewing Bearings
The Slewing bearing can reliably support radial, axial and tilting moment loads. They can be divided into different structures of no gear type, external gear type or internal gear type. Scheerer manufactures both four point contact ball bearings (higher dynamic load capacity) and cross cylindrical roller slewing bearings (higher static load capacity). Available in single or double row.

Recondition for Maximum Value
Wind farm operators are finally enjoying a competitive (per KW) position compared to traditional fossil fuel generated electricity. This highly-competitive environment puts wind-produced energy in a new position where continued cost reductions will only encourage adoption and development of the technology by companies and nations. Scheerer can help companies committed to wind energy get the most from their bearings. At any given time, our reconditioning division is busy inspecting, assessing and refurbishing bearings of all types to their originally installed condition. This can achieve a savings of as much as 60% compared to building a new bearing. This is especially true for large bearings.

Guarantee
Scheerer Bearing guarantees that any bearing we manufacture or rework is free from defects in workmanship or material. Any bearing which is proven to be defective within one year from date of purchase will be replaced or reworked free of charge if the defective bearing is returned, charges prepaid, to Willow Grove, PA and the bearing is found to have been properly installed, lubricated, and used.
Scheerer Product Line & Services

RADIAL BALL BEARINGS
- Single Row Deep Groove
- Double Row Deep Groove
- Angular Contact
- Double Row Angular Contact
- Max-Capacity
- Self-Aligning
- Four Point Contact
- Split Inner Race
- Reciprocating
- All Special Types

BALL THRUST BEARINGS
- Flat seat-Grooved Races
- Flat seat-Flat races
- Self-Aligning
- Banded
- Single or Double Acting
- Combination
- Angular Contact
- All Special Types

OTHER PRODUCTS
- Combination Radial and Thrust Bearings
- Large Diameter to over 100”
- All Types of Special Bearings
- Hardened and Ground Sleeves
- Bearing Components
- Slewing Ring Bearings

RADIAL ROLLER BEARINGS
- Cylindrical
- Single Row
- Multi-Row
- Cross Roller
- Journal
- All Special Types

ROLLER THRUST BEARINGS
- Plain Type
- Washers Only
- Self-Aligning
- Crane Hook
- Combination
- Single Acting
- Double Acting
- All Special Types

SERVICES
- Bearing Repair and Reconditioning
- Clearance Changes
- Bore Tapering
- Flush Grinding & Preloading
- W-33 and W-26 Feature Additions
- Snap Ring Grooving
- Inspection Services
- Ceramic Ball Installation
- Special Coating Applications
